

## Tarea GIT

### Repositorios locales

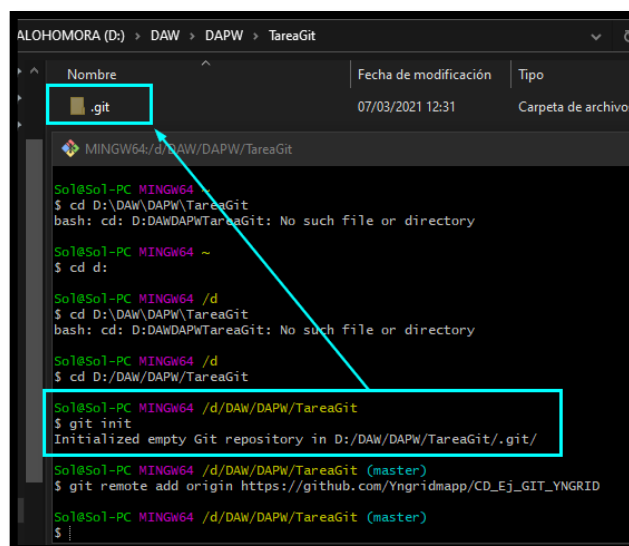

1. Crear un repositorio nuevo con el nombre CD\_Ej\_GIT\_tunombre (por ejemplo CD\_Ej\_GIT\_Sabela) y listar su contenido. Añade un Readme.md

Desde git bash nos posicionamos en la carpeta que hemos creado para asociar nuestro repositorio local al remoto.

Una vez dentro, con el comando **git init** reconocemos la carpeta como nuestro repositorio local.

Como podemos ver ya tenemos una carpeta `.git` dentro de nuestro repositorio. Ahora para asociar el repositorio local con el remote usamos el comando **git remote add origin url\_repositorio** como resultado vemos que al lado de nuestra carpeta local pone "master".

2. Comprobar el estado del repositorio.

Para comprobar el estado del repositorio usaremos el comando **git status**

```
So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGit (master)
$ git status
On branch master

No commits yet

nothing to commit (create/copy files and use "git add" to track)

So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGit (master)
$
```

3. Crear un fichero index.html con algún contenido y realizar un commit con el mensaje “Añadido index.html”.

Para ver como aparece el fichero que hemos creado, antes de hacer el commit, hacemos un git status, y vemos que aparece en rojo

```
So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGit (master)
$ git status
On branch master

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
  index.html

nothing added to commit but untracked files present (use "git add" to track)

So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGit (master)
$
```

Para hacer el commit usaremos el comando **git add nombre\_archivo**, y después haremos **git commit -m “mensaje”**

```
So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGit (master)
$ git add index.html

So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGit (master)
$ git status
On branch master

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)
  new file:   index.html

So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGit (master)
$ git commit -m "Añadido index.html"
[master (root-commit) c6e47cf] Añadido index.html
1 file changed, 13 insertions(+)
create mode 100644 index.html

So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGit (master)
$
```

4. Ver el estado del repositorio.

```
SoI@SoI-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)
$ git status
On branch master
Your branch is up to date with 'origin/master'.

nothing to commit, working tree clean
```

5. Añadir una nueva página por ejemplo contacto.html con algún contenido.

Al crear una nueva página, si hacemos **git status** vemos que nos aparece en rojo el nuevo archivo, para hacer el commit de este archivo primero debemos hacer **git add contacto.html**

```
SoI@SoI-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)
$ git status
On branch master
Your branch is up to date with 'origin/master'.

Untracked files:
  (use "git add <file>..." to include in what will be committed)
  contacto.html

nothing added to commit but untracked files present (use "git add" to track)
```

Si volvemos a hacer **git status** vemos que nos aparece en verde el archivo contacto.html, ahora si está listo para hacer el commit.

```
SoI@SoI-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)
$ git status
On branch master
Your branch is up to date with 'origin/master'.

Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
    new file:   contacto.html
```

6. Hacer un commit de los cambios.

```
SoI@SoI-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)
$ git commit -m "Añadido contacto.html"
[master d9fdb6c] Añadido contacto.html
1 file changed, 15 insertions(+)
create mode 100644 contacto.html
```

7. Mostrar el historial de commits del repositorio.

Para ver el historial usaremos el comando **git log**

```
SoI@Sol-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)
$ git log
commit d9fdb6cfac3cd6146708c474db3049b9b2a82e3 (HEAD -> master)
Author: martinez.a.yngrid@gmail.com <martinez.a.yngrid@gmail.com>

So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)
$ !
```

- c. Crear el fichero login.log en la carpeta log.

```
So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGIT/logs (master)
$ ls
apache.log  login.log  pagina.log

So1@So1-PC MINGW64 /d/DAW/DAPW/TareaGIT/logs (master)
$ !
```

d. Modificar el index.php añadiendo un formulario de login.

e. Ver el estado del repositorio de forma abreviada e indicar qué significa cada letra.

Otra forma de ver el estado del repositorio es con el comando **git status -sb**. De esta manera, podemos ver de manera directa y clara en qué estado está cada fichero (M para modificados, D para eliminados, ?? para ficheros no trackeados...). Y el color de esas letras nos indica si está en el stage (verde) o no (rojo).

```
Sol@Sol-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)
$ git status -sb
## master...origin/master [ahead 2]
M index.html
?? login/
```

9. Hacer un commit de los cambios ignorando la carpeta logs.

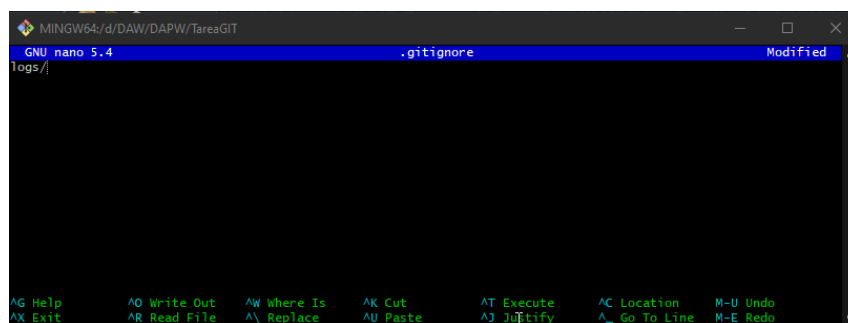

Para realizar este paso, creamos un archivo pagina.log para hacer el commit de todos los archivos menos el de la carpeta logs

```
Sol@Sol-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)
$ git status
On branch master
Your branch is ahead of 'origin/master' by 2 commits.
(use "git push" to publish your local commits)

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   index.html

Untracked files:
  (use "git add <file>..." to include in what will be committed)
        login/
        logs/pagina.log

no changes added to commit (use "git add" and/or "git commit -a")
```

Si volvemos a hacer git status vemos que ya ignora la carpeta de logs

```
SoI@SoI-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)
$ git status
On branch master
Your branch is ahead of 'origin/master' by 2 commits.

## Repositorios Remotos

1. Sube todos los cambios a un repositorio remoto. Sube también el enunciado y el documento con las soluciones. Puedes crearlo en bitbucket o en github. Ponlo público y comparte la URL.

Paso realizado en la captura anterior

2. Sube la rama (v0.1\_tunombre).

Paso realizado en la captura anterior

3. Colabora en el repositorio remoto de otro compañero. Haz un fork de su repositorio.

```

Sol@Sol-PC MINGW64 /d/DAW/DAPW/TareaGIT (master)

4. Acepta al menos un pull request que hagan contra tu repositorio.

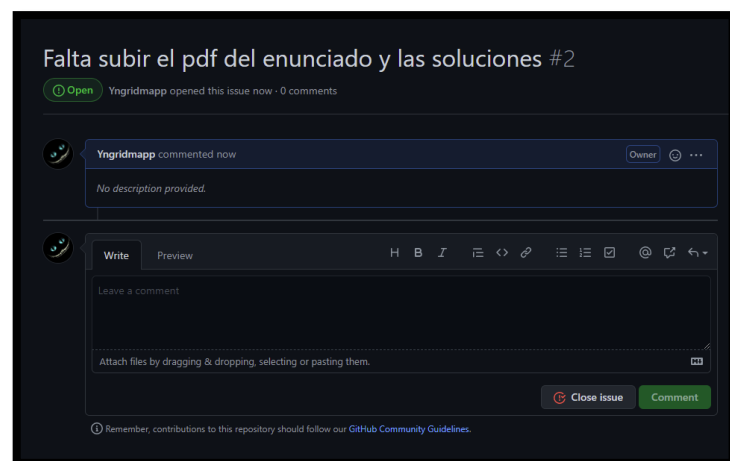

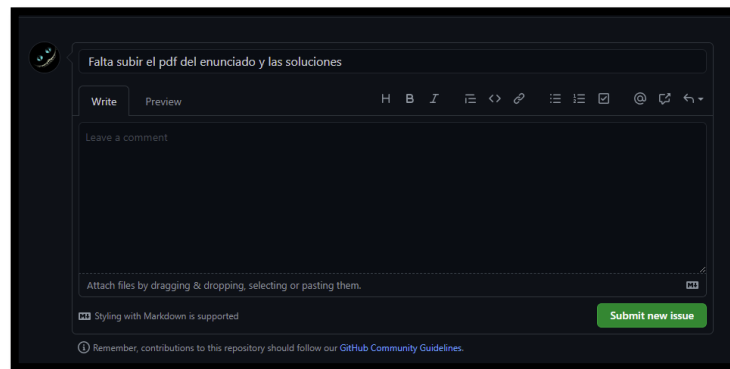

5. Añade como colaborador a algún compañero/a.

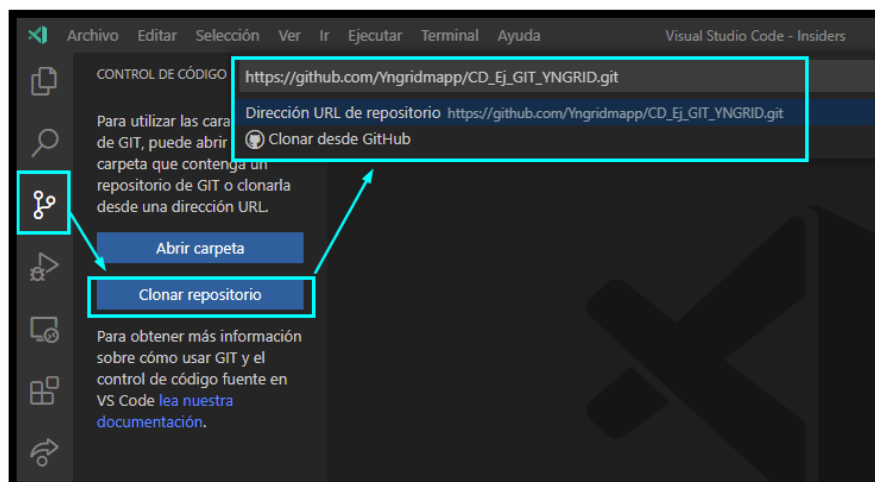

## 6. Crea una issue.

## GIT en Visual Studio Code

Todos los siguientes pasos deben ser realizados en el Visual Studio Code.

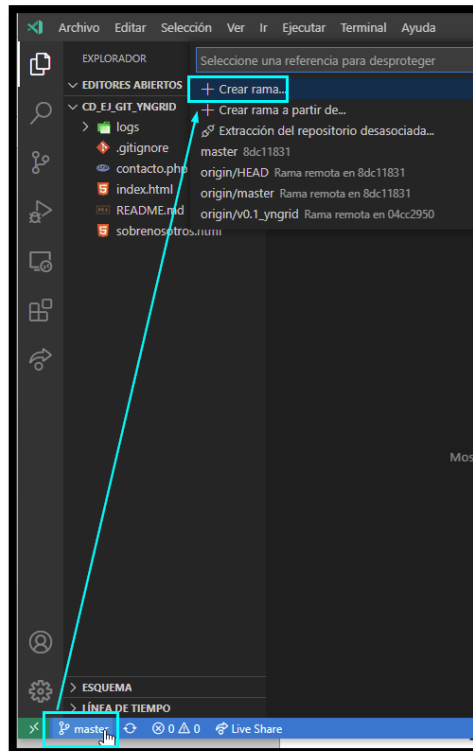

1. Abre el Visual Studio Code y clona el repositorio que te creaste en el ejercicio anterior.

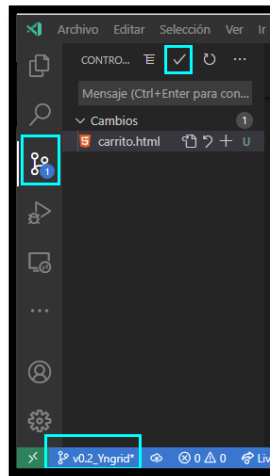

2. Crea una nueva rama que se llame (v0.2\_tunombre) y cambiate a ella. Inserta captura donde se vea que cambiaste de rama

Si queremos crear una rama le damos a esa opción, si lo que queremos es crear una rama a partir de la de master le damos a la siguiente opción.

3. Crea un nuevo documento llamado carrito.html con algún contenido.
4. Realiza un commit de este documento  
Para realizar el equivalente a git add, le daríamos al símbolo del +, y para hacer el commit le damos al visto.

5. Sube los cambios al repositorio remoto.

Le damos a insertar para realizar el push
